RILEVAMENTO A DISTANZA DI QUALSIASI VOLUME
PER RESTITUZIONE DA DUE FOTOGRAMMI

1988

SURVEY AT A DISTANCE OF A BODY BY MEANS OF TWO PHOTOGRAMS

The book deals with a new method of perspective restitution which, by two parallel photograms, allows to reconstitute form, dimension and position of a body freely placed in the space, without knowing the placing of any straight line or plain and without having to measure any element of the object we are representing.

Two interesting examples of application follow the strict and exhaustive theoretic development.
