## **THE THEOREM OF REPRESENTATION AND THE UNIFICATION OF ITS METHODS**

The study, published with introduction of Prof Riccardo Migliari, shows a new theorem, that singles out the necessities and sufficient objects to create a representation space system. This theorem has deemed therefore fundamental for the Space Representation Science.

For theorem's own nature, its two dual statements are joined in the methodology of all representation systems.

The fundamental theorem well allows to unify, in spite of the distinct in the space and time genesis, all the methods of the Representation Science.
