NINE REAL DIMENSIONS OF THE SPACETIME DISCOVERED

2011 - 2017

Abstract

For a long time we have been looking for a theory of everything that includes all forces of nature known and knowable.

Albert Einstein demonstrated using the principles of physics that space, fused with time, deforms.

Conversely, the theory of the nine spacetime dimensions demonstrates using principles of geometry that there are ten dimensions fused with as many forces of nature.

Moreover, the nature of the nine dimensions shows that time is not a dimension, but a characteristic of every dimension, because it belongs to the extension of every dimension.

Thanks to the results of experimental physics, we can prove that the nine dimensions of spacetime structure macrocosm and microcosm according to one simple law.
