TEN REAL DIMENSIONS OF SPACETIME DISCOVERED

The most awaited discovery to have a theory of everything

2011 - 2016

Abstract

For a long time we have been looking for a theory of everything that includes all forces of nature known and knowable.

Albert Einstein demonstrated using the principles of physics that space, fused with time, curves.

Conversely, spacetime ten real dimension theory demonstrates using principles of geometry that there are ten real dimensions fused with as many forces of nature.

The discovery was expected for many decades to validate the theory of superstrings, which reconciled quantum mechanics with general relativity in a theory entirely.

Thanks to the results of experimental physics, we can prove that the ten dimensions of spacetime structure macrocosm and microcosm according to one simple law.
